Insource Launch Trust Incentive - Apply Today

With the increasing pressure from the Centre for all Trusts to provide Daily PTL Reporting by end of March, Insource are looking to help make this happen – fast! The company are launching a call for Strategic Partners by setting aside a £100K fund to enable automated RTT and PTL reporting. This incentive will be subject to procurements of Patient Pathway Plus (PP+) logged before end January and will be open to all NHS Trusts throughout the UK.

Northern Care Alliance - Daily PTL Reporting

Concerned about tracking every patient accurately Northern Care Alliance (NCA) deployed Patient Pathway Plus (PP+) across both Salford Royal and Pennine Acute NHS Trusts - covering five hospitals. Previously taking 14 days to manually produce statutory RTT reports using Excel spreadsheets, NCA now has fully automated daily reporting that gives complete visibility of elective waiting lists for capacity planning and spotting clinical priorities.

Identifying over 5,000 patients, not on the old PTL, PP+ has delivered a five-fold increase in productivity by taking data direct from the source systems, saving time and money.

Insource and NCA are delighted to be nominated as HSJ Finalists

Insource Launches PP+ Enterprise

As Trust mergers proliferate and regional RTT reporting becomes the norm, Insource launch Patient Pathway Plus Enterprise to facilitate cross boundary patient management and electives reporting. Providing a combined Regional waiting list for centralised PTL reporting and care management, the PP+ automated data consolidation and evidence-based validation platform saves individual Trusts huge amounts of time and manpower costs.

PP+ is a proven solution operational in numerous Trusts throughout the NHS. This unique next-step announcement extends proven Trust-level success across a region and helps maximise manpower resources and provide a powerful data platform for patient pathway and elective care management.

Data Accuracy - The Critical Foundation

Whilst the NHS strives for regional reporting and Trust mergers become more prevalent, and more recently, provider collaborations are set to be forged through the Integrated Care Systems (ICSs) - the stark issue remains – if the data shared is inaccurate only poor decisions can be made. Having a data foundation that can cross check data using evidence-based methodologies to ensure data accuracy, and can consolidate data from multiple data formats into a unified data layer becomes an absolute necessity.

Insource data management platform provides a strategic solution for region-wide services. This powerful data consolidation solution integrates any combination of administrative or process data, from multiple provider systems, to provide a single source of prepared, cleansed and structured, unified data to facilitate region-wide care and resource deployment.

PP+ Helps Reduce Elective Backlogs

With the huge electives backlog because of Covid, already stretched Trusts are reaching breaking point. Patient Pathway Plus (PP+) from Insource can help. By automating data collection, validation and consolidation, PP+ can eliminate cumbersome excel spreadsheets, save huge amounts of time, dramatically improve data accuracy and streamline PTL waiting list reporting.

PP+ gives Trusts visibility of their true demand, the ability to spot clinical priorities, such as extended cancer waits, and provides full capacity planning – often uncovering hidden capacity – to give Trusts tighter management of already extended resources.
